Tab_Ident

- HashMap ⟨String, Ident⟩ table

+ Tab_Ident (int Table): void
+ abIdent : int
+ existIdent (String def): boolean
+ MergeIdent (String defIdent, Ident n): void

Ident
*
- pavame : String
- type : int

+ memeIdent (Ident a, Ident b): boolean
+ Ident (String n, int b): void

IdVal

- valeur : int

+ IdVal (int v, String n, int d)

IdVar

- offret : int

+ IdVar (int offret, String n, int d)

Token
- X Declaration
- X Initialization
- X Expression
- X Writer

Declaration
declare (int type, String nom, valor)

Expression
- Statement < Token >
- Stack < Token > relatiator
- Stack < Token > NextOperation

- calcul () : void
- emile (int or) : void
- emile (char op) : void
- empty () : void

main
+ emile () : void
+ arg () : void
+ empty () : void
+ empty () : void
